Myriam,

I added on 4 chemicals after the CI-PFECA that both John and we want.

In the Wilmington residents blood serum we also saw Hydro-EVE, PFO5DoDA, and PFO4DA. Nafion BP2 was the 4<sup>th</sup> checmicla we found in the human serum. I think they would be very useful standards as Nafion BP2 is now commercially available and showing effects in dosed rodent studies.

Last I added a 1-H substituted perfluoro ether carboxylic acid we saw in high abundance in the NH dispersion and air samples. I think this may be commercially available but I cannot confirm this.

James and I just chatted about this. He is on board.

Mark

**Subject:** Final review of work assignment

Mark, James, John:

I need your input ASAP for Task 4- what other PFAS compounds I should add to the contract? Note that I need to complete this no later than tomorrow. I only have this week and 3 days next week to complete PARS write-ups for staff leaving the branch as well as my own assessment, complete the work order, etc. I am sending the QA forms to Sania for review. I will be gone the second week of September until October. Kevin Sudderth has graciously accepted to be my back-up because as far as I know none of you have COR credentials. The main issue is that Kevin will need your assistance as he knows nothing about the details of the project.

Thanks in advance for your input!

P.S. This has to be right- once in the system we cannot modify the task order.

Myriam Medina-Vera, Ph.D.
